

SPACEGUARD LEED Information

SpaceGuard Products is committed to ensuring a sustainable future by fostering partnerships with suppliers to create a cleaner, safer place to live and work.

The U.S. Green Building Council's Leadership in Energy and Environmental Design (LEED) consists of a suite of rating systems for the design, construction, and operation of high performance green buildings. SpaceGuard's innovative safety & secure storage solutions can help you achieve LEED points towards the certification of you new construction or major renovation project in the following categories:

Materials and Resources

MR Credits 4.1 and 4.2

Recycled Content: Increase demand for building products that incorporate recycled content materials, thereby reducing impacts resulting from extraction and processing of virgin materials.

All SpaceGuard safety & secure storage products are produced from North America's most recycled material, steel, so MR Credits 4.1 and 4.2 can easily be achieved.

MR Credits 5.1 and 5.2

Regional Materials: Increase demand for building materials and products that have been extracted, harvested or recovered, as well as manufactured, within 500 miles of the project site.

SpaceGuard's manufacturing facility is centrally located in Southern Indiana and raw materials are purchased from vendors with locations throughout the United States. MR Credits 5.1 and 5.2 can be obtained, depending upon proximity to our manufacturing location and sources of our raw materials.
